Tray-Pak Corporation Plans to Open New Clean Room

Reading, Pa. – Tray-Pak Corporation, an industry leader in plastic thermoformed packaging, is announcing a new addition to its list of substantial resources by adding a class 8 clean room. The clean room is expected to be operational in the fourth quarter of 2007.

“For over 30 years we have been providing packaging solutions to our customers throughout a variety of industries. Some of the solutions we provided to the Medical Device market were limited to design, engineering, and prototyping. The addition of a clean room will allow Tray-Pak to provide our customers, that require it, a turn-key solution that uses our front-end resources as well as providing them with a finished product in a clean room environment.” said Randy Simcox, president and chief executive officer.

The immaculate environment of the clean room is designed for medical and pharmaceutical applications, and will also meet the packaging requirements needed for highly sophisticated industries such as electronics and aerospace.

The clean room is designed to house two state-of-the-art thermoforming machines and employ up to 18 additional people with the ability to run three shifts. Tray-Pak is an ISO 2000:9001 certified company.
